

# THE GLEICHEN CALL

VOLUME XXXIII NO. 23

GLEICHEN, ALBERTA, WEDNESDAY AUGUST 21, 1940

SUBSCRIPTION \$2.00 PER YEAR

## MUCH ACTIVITY SHOWN DURING REGISTRATION

Over three hundred people registered at the hall last Saturday day when the folks of Gleichen and district in common with the rest of the Dominion turned out. Again on Tuesday and today they were hurrying to register. As there are in the neighborhood of 800 names on the voters list it is expected that more than a thousand will give the government the Dominion government during the campaign.

The hall presents a lively appearance with the many tables and the deputy registrars, their volunteer assistants and the young and old entering to give the desired information.

The question about milking cows is the cause for many a puckered brow and a broad grin.

## THE WORLD OF WHEAT

The following methods are used by experienced seed growers in threshing stored grain:

If the grain consists of wheat, a thresh after east, or if of oats, then thresh after west.

Next run the threshing machine idle for about ten minutes, then clean out the two bins. Then the sifting machine can be run under the bins which can be removed, but if not, then a doubled up sack can be placed in the woven turn and carried through the auger; this operation will remove the grain.

No separator should enter the machine and with a wire hook and a small whisk broom should clean out the grain which will be found lodged on ledges and in crevices. After this the machine can be run again for a minute or two.

The first separator should enter the machine and with a wire hook and a small whisk broom should clean out the grain which will be found lodged on ledges and in crevices. After this the machine can be run again for a minute or two.

The first separator should enter the machine and with a wire hook and a small whisk broom should clean out the grain which will be found lodged on ledges and in crevices. After this the machine can be run again for a minute or two.

Then the grain is to be sacked and ready to be sent to market.

The following are the racks which are used to haul the stooks to the thresher machine should be thoroughly swept out and kernels of old grain should contain only the seed grain.

Needless to say the racks which are used to haul the stooks to the thresher machine should be thoroughly swept out and kernels of old grain should contain only the seed grain.

The camping season is well on its way with all the tempting array of foods that can be stored away for winter use.

In home canning there are four principle steps, each of which is important in obtaining the best results. First, choice of product—no amount will make a good canned product unless the trees are in good condition. Next, preparation and packing are included. Then preserving—sufficient heat must be attained to destroy all spoilage organisms. Fourth—most important of all is air tight sealing so that no oxygen organisms may enter to cause spoilage.

At one time all fruits were cooked in open kettles with large quantities of sugar to which thickening preservatives were added in strong flavor with or without cooking. These methods are especially in some cases, but for regular use canning in glass jars or tin cans is the most satisfactory.

There are some points that should be checked to make sure that methods are up-to-date.

Be sure that the rubbers fit the type of jar. The wide rubbers are for spring top jars; narrow rubbers fit screw top jars.

Use pint jars for vegetables. They are easier to sterilize.

Do not shorten the time of sterilization. Vegetables contain little acid and therefore, require long sterilization to assure their keeping.

If a rubber band is used, keep the jar colored with water to two inches over its top.

Keep the water boiling. Count the time of sterilization from the time the water begins to boil.

Remove the jars at the end of the required period. Inefficiently processed foods cultivate spoliation and are sometimes poisonous, more often are unpalatable. Never take a chance.

BIG FELLOW

No peashooter is this anti-aircraft gun, and there are thousands like it scattered throughout the length and breadth of Britain to-day.

## ITEMS OF INTEREST CRAIGIELAND AND DISTRICT

Private Roy Shantz and family were Sunday visitors in the district.

Mr. Gordon Gimbie of Royalton is at present visiting with his parents Capt. and Mrs. Gimbie.

Max Walls and Oliver Wright of Strathmore have just finished painting the Craigieland and Alton schools,

Miss L. Nelson has been engaged teacher for the next school term. Miss Ne. is from Sodden in Alberta.

The wedding of Miss Ethel Dankworth to Mr. Fred Linker of Calgary took place at Calgary recently. Rev. Dr. Koenig officiated.

Mr. and Mrs. Fred Dankworth celebrated their silver wedding last Sunday with a gathering of the neighbors for a social hour.

John Grant and Carl Collier have enlisted in the air service corps and are at present in the air base at Mowata Park.

Mr. and Mrs. Henry Dankworth gave a large wedding party and dance in honor of their daughter and son-in-law, Mr. and Mrs. Don Brinkier. It was a swell affair and everyone had a lot of lovely wedding presents. We wish them prosperity through their married life. Mr. and Mrs. Binkier are to reside in Calgary.

There was a big surprise spring on Capt. and Mrs. Grant when their family from different parts of the province gathered to help celebrate a few days ago. The family had a few from outside of the family as well on hand and all brought their own eats of which there was plenty. The only one of the family not present was Gordon Gilmore of Mowata who was away on the sick list. During the afternoon the guests of honor were presented with a splendid wedding gift, the occasion being the 30th anniversary of their marriage.

Mr. and Mrs. Grant and their family, after having all that was good to eat with plenty of ice cream thrown in, the party finished up with all wishing Capt. and Mrs. Grant long life and good health.

MRS. W. F. DURSTON

Mrs. W. F. Durston of Queenstown died in Vulcan last week after an illness well known in Gleichen especially by old timers. She was a widow of the State Church which held her in high esteem for many years. Mrs. Durston had resided in the Queeness district for more than 30 years and is survived by her husband, two sons and a daughter. Her services were held in Vulcan on Monday afternoon under the auspices of the Gleichen Chapter, O.E.S., when some eighteen members attended.

Took long cooling effect flavor and color and made the product too soft. Seal jars tightly when you never open after sealing.

If the rubbers are observed the canning of these products in the home is simple and successfully carried out, and nothing is more satisfactory to a housewife than a store cupboard filled with a variety of home canned fruits and vegetables.

## RED CROSS NOTES

The Red Cross work room is in a working machine. If anyone has a machine which would be more suitable for a workroom, then loan it for a while we would be most grateful.

The National Red Cross in London, Eng., send twelve pound parcels a week to British prisoners of war in Germany. Anyone sending parcel to prisoners of war should send same directly to the Red Cross to assure safe delivery.

The Red Cross stands ready to help any local case of need. It is comfortable for fighting forces, but we do not consider our duties finished in the actual line of battle. There are their families who are left behind, and those of whom have been overseas not only those who are constantly approaching prosperity. It still goes well they have learned through grim perseverance to get along, but in case of accident or illness they are helpless and cannot be used. The energy and enterprise of the ladies who come to the work room every week is indicative of the spirit of the Red Cross in its willingness to help provide a ministry of clothing and quilts which may be delivered.

MRS. S. E. DAFOE, War Work Convener.

Establishment of another Maple Leaf Club for the accommodation of Canadian troops on leave in London, Eng., has been authorized by the Canadian Red Cross Society. The first Maple Leaf Club was established by the war, has provided thousands of Canadian soldiers with overnight accommodations and meals at the lowest possible cost. The club is open to all Canadian troops in England.

Establishment of the families of Canadian troops in England.

Maple Leaf Club has been created and further accommodation is needed for the Canadian troops whom are unfamiliar with London.

Dr. Rutherford also announced that the Canadian Red Cross is sending 6,000 linens to Gleichen which will be used with mobile surgical units of the Canadian Neurological Hospital.

These are urgently needed to transact the surgical work to handle head injuries resulting from bombing.

There is no accommodation for the officers in the surgical units and they must be transferred separately in hospital ships.

A donation of 100,000 pairs of socks, made by the women of Canada, were recently given to the British Navy League and other organizations whose requirements were urgent. This Dr. Rutherford stated is in line with the Canadian Red Cross policy of making our supplies available to all branches of the service, British as well as Canadian.

COMING EVENTS

Aug. 21—Dance at Meadowbrook Community Hall. Mrs. Traitor's orchestra.

## MANY RECRUITS TURN OUT TO ATTEND BATTERY DRILL

The 22nd Battery was recruited to near full strength when the dead line arrived on August 15. In the meantime 100 recruits turned up.

A number who wished to join were rejected not being able to pass the medical examination.

The men have been divided into three groups. Those of Queenston and Chay will drill at a place situated near their localities for a time twice a week. This will extend to the long trip to Gleichen, Meadowbrook and Arrowhead for training.

While Gleichen makes the third. Meadowbrook and Arrowhead will drill in town one night a week while on Sundays they will unite with Gleichen for drill.

Sunday morning for the first time the squads went into action on the field and the training officers had a busy time trying to get the kinks out of the men. To the onlookers it was a sight to see the men marching to swing from clumsy trunks to swing from slouchy belts through a soldier swing when they

are used to swinging from a chair.

At present there is a great lack of equipment but it is expected that it will be rectified in a very short time.

With the training the boys are getting now they should look like real soldiers when they don their uniforms.

## THE WEEK IN EDMONTON

Praise for Alberta's system of coal making was voiced by Hon. C. S. Leary, minister of public works for British Columbia, when he visited Edmonton during the week. He and his wife, Mrs. K. S. Leary, were invited to a luncheon by the coal province, called on Alberta's ministers of agriculture and trade and industry. Both visitors intend to develop the coal mining interests between the two provinces.

Grain storage problems consequent upon the war situation have resulted in the steady overlapping of grain advance and fall harvest. The steady overlapping of grain advance and fall harvest has been a major factor in the development of grain storage facilities.

Following representations of various interested bodies, Hon. E. C. Manning urged immediate federal action to arrange for the extension of grain advance and fall harvest facilities to assist in the threshing process. The following representations of various

## A Ponderous Tome

A ponderous tome, comprising nearly a thousand pages, to say nothing of immeasurable appendices and reams of statistics, the report of the Royal Commission on Dominion-Provincial relations provides plenty of food for thought and a good deal of material for discussion, and it is a reasonable conclusion that it will occasion a great deal of talk before its recommendations are implemented.

It is safe to say that no more important document has been presented to the nation since Confederation and it requires little reflection to state that the most important source of changes recommended by Mr. St. Leger and his colleagues were put into effect. A lot of water has flowed under the bridge in this rapidly growing country since the date when the provinces were welded into a great geographical entity—Canada—by the fathers of Confederation in 1867.

Through the fathers of Confederation, Canada grew with a great deal of wisdom and foresight which they applied to the Dominion and the provinces in their several spheres of jurisdiction, even they could not have been expected to predict the immense growth, the great changes, the enormous diversity and scope of problems which would come about in less than three quarters of a century. The truth of the matter is that the country has undergone a great many trials and tribulations for its guidance and in this affair, though these rules and regulations were admirably suited to its needs at the time they were formulated.

As a result of these great and in many cases unpredictable changes, and of the changed conditions under which the national and provincial governments have to operate to-day, the clothes which clad the nation in 1867 are likely to choke the full grown adult of to-day. Hence new clothes must be cut and fashioned to suit the requirements of the present.

### Favorable Reception

While it is yet too early to form any conclusive opinion on the recommendations of the Royal Commission as a whole, its general flavor appeared when first released to meet with a favorable reception in the west by those who might be expected to be competent to give an opinion on such weighty subjects and based solely on newspaper summaries of the contents of the document.

Certainly there can be no two opinions on the recommendation that the Federal government take full responsibility for unemployment relief, though municipal men are inclined to question the decision that this responsibility should be confined to the employables, on the ground that the unemployed jobless have multiplied enormously during the depression decade. It can safely be assumed that strong pressure will be exerted to secure a greater measure of federal aid, if not full responsibility, for the unemployed on relief.

On the first appearance of the summary of the report municipal men were also inclined to look askance at the absence of any definite recommendations for relief from municipal indebtedness. It may be presumed, however, that they will be inclined to support the proposal for a loan for a bond dealing with Dominion-provincial relations, since the municipalities are creatures of the respective provinces which set them up and that this is a matter which the provinces should deal with themselves. No doubt, also, it was felt that the financial relations between the municipalities and the provinces are so variable in different parts of the country that the Commission should not delve into this subject beyond making a recommendation that the provinces assume a greater measure of control over municipal finance.

### A Secondary Consideration

While, as already mentioned, the country deserves such a report as that submitted by the Royal Commission and makes some changes in the constitution in the direction of better adaptation of government to the present day requirements of the country and its constituent parts, it is unfortunate that it comes at a time when the nation is bailing all its energies to the prosecution of a war, which is evidently to be waged to a finish.

The term "unfortunate" is used, because, while such important measures as those recommended by the Royal Commission are not to be treated lightly; in fact, desire and should have the most serious and thoughtful consideration before action upon them is taken, if time is taken by the national government and those of the provinces to such questions at the present time it might detract something from the country's war effort. On the other hand, the financial relationships between the Dominion and the provinces are too important to be dealt with hasty and without a full quota of discussion.

In view of the fact that this country is now engaged in a struggle for its very existence, it may be necessary to defer action on the report until such time as more attention can be given such problems without running any risk of interfering with a matter of even greater importance.

### Appeal For Funds

D. H. Gibson of Toronto, Dominion president of the Navy League of Canada, and chairman of a Dominion-wide appeal for funds to carry on the work of assisting men of the British and Canadian navies and the mercantile marine, will be launched the latter part of September. Gibson said the appeal will be made to Canadians on behalf of the work in Britain as well as in Canada.

### Would Reproduce Naval Fight

The British government is considering an animated reproduction of the naval battle of Jutland, which will be put on at the New York world fair, Cecil M. Pittichall, commissioner-general for Great Britain at the fair, said. Three British light cruisers defeated the 10,000-ton German pocket battleship Graf Spee in the famous action.

### Air Pilots

**Fighting Airmen Said To Usually Have Blue Eyes**

Good fighter pilots in the air usually have blue eyes.

This is not a matter of mere coincidence. Scientific tests, carried out on the object of finding the ideal fighter pilot, have proved it.

All pilots must be of good sound stock and must pass a strict medical examination. This includes tests to find whether the applicant can withstand the strain of flying in all climates and all altitudes.

Eyesight must be first class with correct color vision and muscular balance.

The ears, nose and throat examination is also important, as are the essential variations in the sound of the engine may be important, and a pilot must be able to hear messages coming through his earphones under all circumstances.

It is the main general characteristics which are the real pointers. Good fighter pilots vary a great deal in height—indeed, in purely physical characteristics, but they all have something in common. This is a quality which indicates good health and physical stamina.

As to whether the color of the candidate's eyes is any real guide, the author has no definite answer, but while brown or gray eyes go with a sympathetic temperament, the steely blue denote the independent, combative nature of the ideal fighter pilot.

### Maybe Queen Set Style

#### Parasols Have Come Back Into Fashion After Many Years

Parasols are coming back with summer fashions in the greatest numbers since the '90s style scouts of fashion.

In Manhattan's largest shops they are hailed as "tremendous news" and are being shown in gayer designs and fabrics than the '90s ever knew.

What's behind the parasol parade? Nobody seems to know. Some say it is the Queen's idea. Others say it is a visit to Canada and the United States last summer. Others say it's just part of the general trend.

### SELECTED RECIPES

#### STEAMED ALL-BEAN BROWN BREAD

1 cup Kellogg's All-Bean  
1 cup sugar milk or buttermilk  
1/2 cup raisins  
1/2 cup molasses  
1/2 cup sugar  
1 cup flour  
1/2 cup soda  
1/4 teaspoon salt  
  
Combine All-Bean, sugar, raisins, molasses, sugar, flour, soda and salt. Add to first mixture, stirring until dry disappears. Fill tightly and steam for 1 hour. Yield: Two loaves (1-lb. cans).

#### SALMON CASSEROLE

4 tablespoons butter or other shortening  
3 tablespoons flour  
2 cups milk  
2 cups cooked  
1 cup canned peaches  
1/2 cup onions scraped onion  
Salt and pepper

Melt a cream sauce with butter and milk. Season to taste. Drain salmon; remove skin and bones and flake. Add salmon, peaches and onions to cream sauce in casserole. Cover with Christie's Premium Soda Crackers which have been broken into pieces. Sprinkle with little lemon rind and juice added to butter. Place under low broiler heat until bubbly and golden brown. Serve immediately.

#### Salmon Casserole

The British Empire and the French Republic are now joined together in indissoluble union so that their high purposes may be accomplished and immense progress has been made in almost every direction. The British Empire is doing its best to prove its strength by improving their defences and adapting their whole economy and way of life to the service of the common cause.—The First Lord of the Admiralty.

### LOOK OUT FOR YOUR LIVER

It may be the cause of your troubles. Get it up the right way, with Fruita-tives.

Your liver is the largest organ in your body and most important to your health. It purifies and digests, gets rid of waste stored energy and the products of metabolism for your blood. When you get rid of old, constipated, stomach and kidneys—your body works better. You feel "renewed," healthy, energetic and happy.

Relieve yourself of these malaises, as thousands have—with Fruita-tives, for 35 years. Fruita-tives are the best laxative, diuretic, stimulant, liver tonic, and help especially to help weak, tired women. Over 1,000,000 women have reported marked improvement in their health. WELL WORTH TRYING!

**FRUIT-A-TIVES tablets**

### An Interesting Test

**Experiments To Determine Whether Hot Water Freezes Faster Than Cold**

Does hot water freeze faster than cold water? This has been a subject of much controversy and laymen have often asked me to settle the question. Now I have done just that.

To the physicist there is just one answer, if the experiment is performed under ideal conditions—namely, that hot water freezes faster than hot. But in practical experiments it is not always possible to attain ideal conditions, and consequently inconclusive, real or apparent, develop.

It was decided to put in the discus that hot water freezes faster than cold, and that if the experiments were started with equal amounts of water the hot one would freeze faster. This was done, and that this would result in freezing quicker. This also would make the experiment inconclusive because the starting conditions were not completely unaltered.

Two series of experiments were conducted by Dr. G. Wickham, of the University of Colorado. He made eight tests. In four of them, 25 cubic centimeters of water at various temperatures were placed in a small cylinder and in the other four equal amounts of water were placed at the same temperatures in pie tins. The time in which it took each sample to freeze in outdoor temperatures of slightly above zero was recorded.

Water boils at a temperature of 199 degrees, Fahrenheit, at the 10,000-foot altitude, where the tests were made. The times in which the cylinders were frozen at 199 degrees, 88 minutes; 86 degrees, 42 minutes; 88 degrees, 39 minutes; 50 degrees, 35 minutes. When the pie tins were cooled, a different set of results was obtained. The freezing times were 199 degrees, 31 minutes; 86 degrees, 33 minutes; 88 degrees, 31 minutes; 50 degrees, 29 minutes.

It is apparent from these figures that the shape of the vessel has a decided influence on the rate of freezing. The boiling point took 54 minutes to freeze when it was placed in a cylinder, but only 31 minutes when placed in a pie tin. When the pie tin was used there was a considerable difference in the freezing time whether the water was at the boiling point or 149 degrees cooler (31 and 29 minutes respectively).

The trouble with most experiments is that they are not made under carefully controlled conditions. Freshly boiled water is in a different state from unboiled water. Heating drives dissolved gases out of water. Heating causes water to become supersaturated. Boiling will precipitate certain dissolved solids. All of these changes make a difference in the rate at which water will absorb heat or give it up.

In selecting tests these factors must be controlled, as well as the air pressure at which the tests are made. The temperature to which the water is exposed must be kept constant, and the specific heat of the vessel in which the water is contained must be known. When these conditions are observed and the only difference between two samples of water is their temperature, then the cold water will freeze faster than the hot.—By John O'Neill in the New York Herald Tribune.

### Coastal Defence

#### Civilian Workers To Meet With War Department

Through the close collaboration of provincial governments with the department of pensions and national health in Ottawa, civilian defence corps in the seaboard provinces of Canada have had a high degree of interest in meeting to watch the emergency arising from enemy raids, sabotage, fire or an explosion in vital ports.

Halifax has a trained corps of 400 civilian workers to man 200 air raid warden stations trained by the St. John Ambulance Association.

Similar organizations exist in Sydney, Saint John, Quebec, Vancouver, Victoria, Nanaimo and Prince Rupert.

### Gaelic And Welsh

Gaelic and Welsh may be spoken freely over the radio in Canada, except from all restrictions placed on foreign language broadcasts. Col. L. D. MacLennan, chief radio director of censorship, co-operation committee, said at Ottawa. "They are basic languages and essentially British, so now they are in the same category as English and French so far as censorship is concerned," Col. L. D. MacLennan.

Bicycles in Paris must be licensed, the fee being equivalent to 50 cents.

### BEE HIVE GOLDEN CORN SYRUP

#### -A Great Energy Food

##### Road Maps

**Investor Has Solved The Difficulties Encountered By Materials**

He would be stationary and perhaps dull without the inventors, particularly those men who conceive the little gadgets and edge human projects into inch or two farther along the road.

There is the matter of road maps; they have caused a lot of irritation in their time. Neatly folded, they look incongruous, but open one and driving a car is like driving a boat on land. Just imagine a jumbo box that last will not be squashed.

But a man with an inventive turn of mind has done something about this named as "map trouble". He has devised a simple case with two compartments, one for a map, one for a roll of camera film, and a small transparent window permits of easy reading. More of that struggling in the wind, like a deep waterman in the Horn with a mainsail that refuses to come home to the yard. The case can be read and its routes traced.

Blessings on the inventors of small things!—Harold Spectator.

##### The Nazi Creed

"War is no scourge of God; it is no punishment from heaven, but the instrument of progress from which a new generation is born. This glorious National Socialist principle we have proclaimed loudly at War Easter, 1940, to our nation and to the whole world."—Dr. Ley, in the Angriff of March 28, 1940.

"Sure I'm a crank for cleanliness

—but it never occurred to me that wax paper should be as unquestionably pure as food itself. Thank goodness a grocer put me wise. From now on my Para-Sani is pure and safe food protection."

Build YOUR walls and ceilings on a safety basis with Gyproc Fireproof Wallboard. Whether new construction, renovations or repairs, Gyproc is the ideal material for walls and ceilings. Just consider these features:

- EASILY AND QUICKLY ERECTED—saves time and labour.
- PERMANENT AND DURABLE—therefore economical.
- WILL NOT WARP, CRACK, SHRINK OR SWELL.
- INVISIBLE JOINTS—panel strips are not necessary.
- SMOOTH, DUST-FREE SURFACES—easy to keep clean.
- TAKES ANY TYPE OF DECORATION —no monotony.
- THE LIGHTEST WEIGHT gypsum wallboard made in Canada.

#### And GYPROC Is FIREPROOF

Gyproc is sold everywhere in Canada. See your local Dealer in Lumber and Builders' Supplies.

Insist on Genuine Gyproc  
—Identify It these two ways:

1. Look for the name GYPROC on the back of each sheet.
2. Look for the Green Stripe on both side edges.

Write to our nearest branch for free Gyproc booklet.

truth, it had been one of the sources of irritation of that very unhappy day that she could not quite remember. She knew that he was not repulsive, but that his nose was too short. It proved on inspection to be of a fleshy, wrinkled, bulbous type, and he was a little older than she had thought. Half her respect was based on the illusion of his youth.

"Now ask all your horrid questions," she said as she stripped her garments.

"Number one," he began. "What did Harlow offer you when I so discreetly withdrew last night?"

"That has nothing to do with the burglar," she answered promptly. "But as it wasn't very important, I will tell you. He offered me a position."

"Where?" he asked quickly.

She shook her head. "I didn't get so far as that. I told him I was perfectly happy with Mr. Stebbings—who, by the way, used to be the lawyer of the Harlow family."

"Did you tell him that?" He thrust his head forward eagerly.

"He'll Be Furious."

"Why, no—he told me, though of course I knew," she said. "He knew the moment I mentioned Stebbings' name."

"How impressed?" he asked after a pause, and she laughed.

"How ridiculous you are! Seriously, Mr. ——" She paused insultingly.

"Carton," he muttered; "half-brother to the hotel but no relation to the club."

"You worked that little jest last night," she said.

"And I shall work it every night you pretend to forget me again. And it is a confession of crass ignorance which no modern young woman can afford to make. I am one of the most famous men in London."

"I think I've heard you say that before," she said mendaciously. "Tell me seriously, Mr. Carton—"

"'Got it!'" he murmured.

"What do you want to know about me?" he asked.

"Nothing," she replied. "As a matter of fact, I have saved you a great deal of trouble by supplying headquarters with all the details they need. Your uncle emerges tomorrow; do you know what 'tomorrow' is?"

"'Tomorrows' I was said with a little pang of apprehension.

"An Elk is going to meet him and take some of the sting out of his anger; suppose he will be very angry?"

"He'll be furious," said the girl, troubled. And then, with a quick sigh, "I'm awfully glad when he has emerged," as you call it. He also me two pounds a week for trouble, but I can well spare that."

"Arthur Ingrie ought to be ashamed of himself to drag you into the depths of hell like this," she said, the impact of the words still on her mind. "And your town is offensive," he said sternly. "rights Elk or I should have been interviewing you at all sorts of odd hours during the day."

"Oh, you!" she said in some dismay.

"Me or I, as the case may be," said Jim. "I'm not quite certain who it is," said Jim Carton.

"And your town is offensive," he said sternly. "rights Elk or I should have been interviewing you at all sorts of odd hours during the day."

"That is what I mean," said Jim. "It is very evident that you know nothing about policemen. You understand, of course, that I am a police officer."

"I suppose that is what you mean?"

"That is what I mean," said Jim. "It is very evident that you know nothing about policemen. You understand, of course, that I am a police officer."

"I suppose that is what you mean?"

"That is just what I mean," said Jim.

Jim found it difficult to put the question without offense.

"Keave had interview with you and I darsay you've discussed his business to some extent. I feel a brute asking you to betray his confidences, but don't suppose for one moment you will. Did he ever talk about foreign gilt-edged investments—American railways, Argentine power stock?"

She was shaking her head before he finished his question.

"No," she said. "I don't think he knows very much about that. I remember the first time I saw him at Dartmoor he told me he didn't believe in putting money in shares. Of course, he never had any money, but you know that, too. I suppose it is stolen money that he's."

"Cashed—yes," said Jim.

He was very serious. It was the first time she had seen him in that mood, and she rather liked him for it.

"Only one more question. Do you know that he is in any way connected with a firm called Rat?"

"No," she said. "I have never heard of such a firm, his seriousness was at an end."

The snugness of the place was very satisfying. The pink table lamps had a soothing effect and she could examine him at her leisure. In

#### Not Yet A Fact

Practical Possibilities of Atomic Power Have Not Been Proved. The theory is likely to be the lodestar of uranium 235, speed battleships across the Atlantic or revolutionizing the power industry, was seen by University of Toronto professors. Coal and gasoline they believe, will be used for a long time to come in Niagara Falls as well.

"They haven't enough of it to spring a mouse trap, let alone drive a battleship," commented L. Joslyn Rogers, professor of chemistry. "The theoretical application is not yet known, and whether it can ever be of commercial value is far from proved."

"Apparently if large enough quantities of it could be secured, it would be a valuable addition," Graydon Smith, associated professor of physics. "But it exists in such minute quantities that its practical possibilities are a long way off."

At present the atomic bomb is the only real deposit of it he has.

#### Always Looked After

Great Britain Never Forgets Responsibility To Her Dependencies.

The Colonial Secretary has presented to the British Parliament a bill which shows the long vision of the Empire.

Each year for the next ten years, it is proposed £15,000,000 will be spent on colonial development in economic and other fields. An additional £500,000 is to be spent annually on colonies. Moreover £11,264,488 advanced in loans to British colonies in recent years is to be forgiven the debtors, turned into outright grants.

Colonial at the head of the Commonwealth, stated that 200 pounds of uranium would be required in order to get one pound of U-235. There was no truth whatever in the statement that uranium was widely found over the earth's surface. Great Bear Lake and the Belgian Congo had the only real deposits of it he had.

#### Will Come In Handy

New Oil Deposits Have Been Discovered in Southern France.

The "plutocratic" democracies, cause of so much Nazi anguish, manage to keep one jump ahead of Hitler's grasp. While the Reich is bawling over natural gas-ups in its quest for war supplies, France does quiet drilling at home and strikes oil.

Paris reports reveal that new deposits of natural gas have been found which may prove large enough to supply the nation's petroleum demands.

France previously had an oil output of more than 500,000 barrels annually, but last year's latest discovery is not the sort of thing that will cheer petro-hungry Germany.

All that conveniently located oil will come in handy for the Allies soon, especially if trouble in the Mediterranean turns up. British imports from the Near East—Windsor Star.

#### Information Wanted

The explorer approached the savor.

"Please come to you from beyond the sunset—from the Great White King," he said.

"Tell me," repeated the savage chief, "what you gonna do anything about?"

Using war Trophies

Scrap metal from Ulster is being shipped to Britain in increasing quantities for war use and the Belfast government was advised that a great deal of it would be sent to the continent.

But now we know that they are true; and because of the awful instruments of torture and destruction that the Nazis used in their war against the values of European civilization may be held in the balance.—New York Times.

#### A World In Flames

##### The Moral Insanity Of The Leaders Of The Nazi Party

No followers have done in the past groups have always been influential in the democracies to believe or hope that he would shrink before the last barbiturates; that, if nothing else, he would not stand by while his country would stand him from letting loose a war on all civilization that would spare neither the movements of the past, historic cities nor the homes and lives of peaceful civilians.

Many have found it impossible hitherto to believe the testimony regarding the complete recklessness and irresponsibility, the moral insanity of the Nazi leaders, that have come from Rauchberg and other observers.

But now we know that they are true; and because of the awful instruments of torture and destruction that the Nazis used in their war against the values of European civilization may be held in the balance.—New York Times.

#### Material For Parachutes

##### Product From Silkworm Farm In England May Be Used

Ministry of supply experts are considering using 3,500,000 silkworms to produce silk for parachutes.

It is believed that the silkworms originated at Lullingstone castle by Sir Robert and Lady Hart Dyke, whose "silk" farm has 250,000 mulberry trees and bushes.

The worms' annual product is sufficient to make 200 parachutes, and has passed the official test of 40 pounds to the square inch tensile strength.

A huge river has been discovered off the coast of California. It flows about a half mile under the surface of the Pacific.

Seals form the greater part of the food of polar bears.

#### GEMS OF THOUGHT

##### FIDELITY

Nothing is more noble, nothing more venerable, than fidelity.—Cicero.

A constant fidelity in small things is a great and heroic virtue.—Bonaventure.

Fidelity is simply daring to be true to one's word, right and acting, and faith in the blessing of fidelity, courage, patience, and grace.—Henry Van Dyke.

No greater hope have we than in fidelity, strength and right, and faith in the blessing of fidelity, courage, patience, and grace.—Longfellow.

Only they who fulfil their duty in everyday matters will fulfil them on great occasions.—Kingsley.

#### Know How To Advertise

##### What Men Existently Understood Would Attract Attention

This story appeared in the Reader's Digest: One sunny May day in Central Park, New York, a blind man was seen tapping for attention with his cane. He stopped in front of his chest a sign: "Help the Blind." No one paid much attention to him. A little farther on another blind beggar was doing better. Practically every passerby put a cent in his cup, some even putting a dime in his cup. His contribution. His sign read: "It Is My Duty."

And I Am Blind."

## Town & District

Mrs. Livingston of Minnedosa Man. is visiting at the home of Mr. and Mrs. A. W. Gillies.

Mrs. D. H. Campbell of Delta is spending a few days in town visiting her niece Mrs. G. W. Evans.

This has been a great year for the sale of corn in the Gleichen district.

Every day combines are to be seen leaving town for the farms.

Corp. Ashby now has the necessary forms for registering small arms and it is to be hoped he will see him and have their guns registered.

Grain farmers may have no fear of the rumoured lumber shortage if they will build straw and wire bins for the storage of their crop. It is estimated by experienced grain men that a bed of two feet of straw on dry ground, hog wire can be erected on posts all around and the grain can be stored in safety. If a temporary granary is assured, straw being used for sides. Thatched with green feed sheaves, the jury-rig is guaranteed to withstand most weather conditions.

### THE FIRST HELIOGRAPH

Man may deserve credit that he was the first inventor of the heliograph for flash communication—but he is wrong. The prong horned antelope has been using this form of signaling for perhaps thousands of years.

The animal was a creature of the mink kind. You have only to visit Neniskan National Park, in Southern Alberta where more than 70 of these beautiful but timid creatures are living in safety to realize what an effective danger signal nature has provided for them.

The heliograph consists of white lump patches composed of hair, grass, or leafy stuff, which are held long at the outer ends.

Under the center of each patch is a circular muscle by which the hair can in a moment be raised and spread radially into two great blood vessels which are to lead to the heart in its center. In the bright sunlight these patches flash far across the open prairie giving the alarm signal to other members of the herd and warning them of the presence of intruders. At once the whole herd has a sense of alarm, and with this good start few, if any, enemies can overtake them.

Undoubtedly this method of communication has been of great service to the species in its struggle to survive.

In the prong-horned antelope, it is usually the open prairie where there is little or no cover. About 1914 the rapid decline in the numbers of the antelope in Canada was brought to the attention of the Dominion Government and the necessary steps for their protection were taken.

Previous attempts to breed antelope in captivity had met with little success due to the lack of the shock of capture, and it was believed that only in a large area where they are unaware of their confinement would the animals survive in numbers.

The chief herd at Neniskan Park, however, has survived and has increased through the simple method of building a strong wire fence around them with the minimum of disturbance. The antelope are accustomed and safe outside this enclosure, contemplating with natural curiosity their more fortunate brethren within the park. Sometimes, by methods that any stockman would readily understand, the warden by the adjustment of fences is able to grant admission to any of these applicants for sanctuary.

To the antelope's innate curiosity and natural gregariousness great danger of destruction lies at the first sight of an enemy he bolts away at the speed of a race horse, but unless pursued is apt to turn back and investigate the cause of his flight.

If the enemy is a man with a rifle and is close behind, the antelope has little chance of escape.

When the antelope is on a hillside and comes within range, the first thought is that his eyes may have deceived him, but alas it usually proves another case of one last look.

Besides being equipped with natural heliograph, the antelope has another claim to scientific distinction.

It is the only member of a special family found nowhere else in the world. Like the cattle tribe it has horns, but, unlike them, it is the outside sheath which grows in three main parts, in which the moose and deer shed their antlers. With the latter, however, the whole head is dropped, while in the case of the antelope the outer sheath only is cast off, the inner sheath, which is very heavy, remains and gives rise to a new horn which is pronged, hence the name "prong-horn."
